M Λ MOTO

Skills

HTML5 | CSS3 | SASS | Boostrap | JavaScript | Typescript | Angular | Headless CMS (Strapi) | Node.js | MySQL

Professional Experience

Mar 2022 - June 2022

Front-end Development Singer's Artist Website

Client: Miki

URL : miki-web.live

Miki is a popular singer-songwriter for young people based in Tokyo. I created a website that represents her kawaii style in the simplest possible design.

・Build front-end in Angular and retrieve data from APIs created by the headless CMS (Strapi).

・Implement a custom CMS with Strapi to assist and train clients.

May 2022

Full-stack Development E-commerce site

Client: Trunk Records (Part of school project)

URL : yukayamamoto.me/trunkrecords

Trunk Records sells everything from music products to apparel.

・The backend was HeadlessCMS (Strapi), which passed an API to allow product information to be manipulated on the Strapi GUI.

・For the front-end, I used Angular and the router system to create a more seamless home, product listing, and product detail page.

・Branding from scratch for the design, I also created the logo and product images.

Education

Sep 2021 - Aug 2022

Vancouver Institute Of Media Arts (VanArts)

Web Development and Interactive Design
